PROFILE

As a highly motivated software engineer, I possess a strong foundation in data analysis, data science, and artificial intelligence. I have experience in Agile methodologies and have developed innovative solutions in Tübitak-funded projects. I am a team-oriented, tech-passionate, and growth-driven professional, ready to contribute to dynamic teams.

EDUCATION

Firat University August 2020 - July 2024
Software Engineering **GPA: 3.49**

EXPERIENCE

Stajup | *Data Scientist Intern* November 2024 - March 2025

- Provided consultancy services in the field of artificial intelligence to optimize business processes and develop data-driven decision-making mechanisms, thereby contributing to increased operational efficiency.

Intellium | *Data Scientist Intern* February 2024 - June 2024

- Developed an AI-powered automation to evaluate candidate suitability for company positions, increasing screening efficiency by 30% and reducing recruitment time by 40%.
- Designed an AI model recommending suitable job positions based on resumes and integrated the developed models with Flask framework.
- Designed an SQL-based database for efficient candidate data management and seamless system integration.

Information Technology Department | *Data Scientist Intern* September 2023 - October 2023

- Performed data manipulation, analysis, and visualization to gain valuable insights for business decisions.

Innovance Consultancy | *Data Scientist Intern* July 2022 - August 2022

- Conducted research and development in smart agriculture using IoT and artificial intelligence technologies to increase agricultural productivity within the scope of the TÜBİTAK 1512 program.
- Contributed to model development processes by working on machine learning and deep learning algorithms.

PROJECTS

Improving the Sensory Skills of Children with Autism with AR Technology | *AR, Unity, AI*

- Our project, submitted within the scope of TÜBİTAK 2209-A 2023 2nd Period, where I served as Scrum Master, was accepted by TÜBİTAK.
- We aimed to make the education of autistic children more effective and supportive with AR technology.

Lung Cancer Detection and Treatment System | *PyTorch, ResNet50, Django, Pandas, Numpy, Plotly, Matplotlib, Gemini*

- Managed and developed the project as project manager and developer within the Innovation Campus program prepared in cooperation with Samsung and UNDP.
- My project was awarded 2nd place within the program and received great appreciation for its innovative approach.

T.R. Constitution Assistant | *Django, Llama-3.8, torch, transformers, Pandas, NumPy*

- In this project, the Llama-3.8 model was fine-tuned with a specially prepared question-answer dataset on the Turkish Republic Constitution, and a web-based constitutional advisor chatbot was developed with Django.
- It aims to increase legal literacy by allowing citizens to learn their constitutional rights in an understandable and interactive way.

SKILLS

Python, SQL, HTML/CSS, Pandas, NumPy, Excel, Scikit-Learn, LLM, Generative AI, TensorFlow, PyTorch, Keras, NLTK, Flask, Django, Scrapy, BeautifulSoup, Matplotlib, Seaborn, Plotly, Power BI, AWS (Elastic Beanstalk, Load Balancer, Route 53)

LANGUAGES

English: B1
